PCsaver is a simple, user-friendly system and data recovery appliance.

Innovatively designed to make disaster recovery a hassle-free exercise!

PCsaver for your works today

ANYONE CAN DO A RECOVERY

Recovery of workstations and servers can be done quickly by anyone. Just follow three simple steps to recover your entire system. Cut through the clutter. Minimize downtime after system failure. Time-saving, keeps your business going.

RECOVERS EVERYTHING IN AFTER UNEXPECTED SYSTEM FAILURE

Bare Metal Recovery restore everything back on line – OS, settings, programs, documents, email, desktop icons, screensavers, wallpaper, etc. Saves time, no need to reinstall applications and drivers or do any configuration. Leaves you with more time to attend to other matters. Keeps your business running.

INDIVIDUAL FILE AND FOLDER RECOVERY

Keep you working without disruption by letting you return to a recovery point to recover the files or folders you need.

CONTINUOUS INCREMENTAL BACKUP

Continuously backs up your data all day and night, no matter what you are doing, or what software you are running. Automatically combines all your old backups with your new data. Makes sure your backup is always up to date, and none of your data is lost.

INSTANT RECOVERY POINTS

Create Recovery Points instantly and automatically from continuous data backup. Makes sure you have a known snapshot of your system at a given time for use in recovery later. Allows you to recover your system to an exact point in time in the past.

DUPLICATE DATA SINGLE STORAGE

Stores duplicated data between backups only once instead of many times. Saves lots of disk space and money.

BUILT-IN INTELLIGENT DISK SPACE MANAGER

Auto allocate disk space. No need for manual cleaning. Leaves your IT professional with more productive use of time.

MULTIPLE SECURITY LEVELS AND PASSWORD PROTECTION

No need to worry about prying eyes. Keep your private documents private with a unique multiple security levels control feature.

ENCRYPTED NETWORKING, MULTIPLE CLIENTS AND RECOVERY POINTS

High-speed AES encrypted data transfers of up to 25 GB/hr over standard Ethernet networks. Multiple machines can do full system recovery and backup simultaneously without disruption.
